

Renovation roller shutters

Practical refurbishment package

Der SonnenLichtManager

When replacing windows during renovations, it is important to find customised sun shading and to use existing components. Sound insulation and thermal protection are important issues, particularly where older buildings are concerned. If the existing boxes are still to be used, renovation roller shutters for placing on the window frame provide an ideal solution – without damaging the facade during installation.

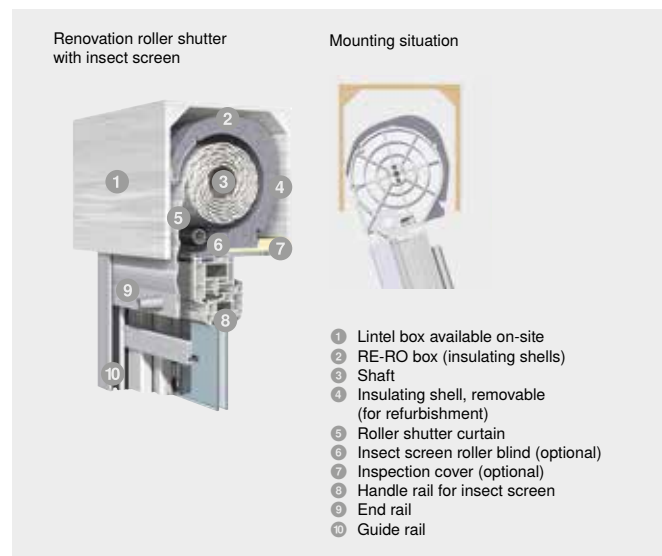

Features

Max. width*	3,000 mm
Max. height*	2,600 mm
Max. area*	7.0 m ²
Drive	Belt, crank, motor, radio motor
Roller shutter curtain	Aluminium or plastic
